

Typhbar TCV®: Questions and answers

What is Typhbar TCV?

Typhbar TCV is a typhoid conjugate vaccine (TCV) manufactured by Bharat Biotech. It contains purified Vi capsular polysaccharide of *Salmonella enterica* serovar Typhi Ty2 conjugated to a tetanus toxoid carrier protein.

Who can receive Typhbar TCV?

Typhbar TCV can be administered to adults, children, and infants 6 months of age and older.

What is the dosage schedule for Typhbar TCV?

Typhbar TCV is a one-dose vaccine. A single 0.5 mL dose, injected intramuscularly, provides protection for at least 4 years in adults, children, and infants over 6 months of age.

Is Typhbar TCV safe?

The World Health Organization (WHO) has reviewed clinical trial results and determined that Typhbar TCV is safe and well-tolerated. Additionally, more than 90 million children have safely received TCVs in introduction campaigns.

Is Typhbar TCV effective?

Three large Phase 3 efficacy studies conducted in Bangladesh, Malawi, and Nepal showed that Typhbar TCV prevented 79-85% of typhoid cases in children 9 months to 16 years old. These results demonstrate that Typhbar TCV is protective across diverse settings in Africa and Asia.

Can Typhbar TCV be given at the same time as other childhood vaccines?

Typhbar TCV can be safely co-administered with yellow fever, measles-rubella, meningococcal A vaccines, polio, and human papillomavirus vaccines.

Is Typhbar TCV prequalified by WHO?

WHO prequalified Typhbar TCV in January 2018. This signifies that the vaccine meets stringent international standards and allows it to be purchased by United Nations agencies. It is an important step for inclusion in Gavi, the Vaccine Alliance's investment strategy, which helps finance vaccine access in Gavi-eligible countries.

Which countries are using Typhbar TCV?

Pakistan was the first country to introduce TCV into its routine immunization program in November 2019. Liberia,

Typhbar TCV is prepared for administration during a TyvAC effectiveness study in Nepal.

Bill & Melinda Gates Foundation/Sam Reinders

Samoa, and Zimbabwe introduced Typhbar TCV into their routine immunization programs in 2021, followed by Kenya in 2025.

(Nepal, Malawi, and Burkina Faso introduced TYPHIBEV,[®] a comparable WHO prequalified TCV, in 2022, 2023, and 2025 respectively.)

Does Gavi support the introduction of Typhbar TCV?

Gavi has provided financial support for eligible countries to introduce TCVs since 2018. Typhbar TCV is available with Gavi support.

TYPHOID CONJUGATE VACCINES

What are TCVs?

TCVs are made by linking the Vi capsular polysaccharide of the typhoid bacteria to a more complex protein. Through conjugation, TCVs stimulate parts of the immune system that older typhoid vaccines cannot, thereby inducing a stronger, longer-lasting immunity among a broader age range.

What are the benefits of TCVs?

TCVs offer protection for at least four years with a single dose and are suitable for children 6 months of age and older, allowing delivery through routine childhood immunization programs. Expanded use of TCVs through routine immunization has the potential to reduce the need for antibiotics, slow further emergence of drug-resistant typhoid strains, and save lives. TCVs are projected to be one of the most impactful vaccines for preventing drug-resistance-associated deaths.
