

By the Numbers

Typhoid conjugate vaccines (TCVs) are:

- ✓ World Health Organization (WHO) recommended for **routine use in children** in countries with a high burden of typhoid and/or high rates of drug-resistant typhoid.¹
- ✓ **Eligible for support** from Gavi, the Vaccine Alliance (Gavi).

¹ In countries with a high burden of typhoid or high rates of drug-resistant typhoid, WHO recommends a booster dose, particularly for children who received a first dose younger than 2 years of age.
